DEPARTMENT OF THE ARMY

JOACHIM KASSIL

IS OFFICIALLY COMMENDED

FOR

outstanding contributions to the USAR Personnel Electronics Records Management System (PERMS) operations. Mr. Kassil designed and developed a user-friendly menu to be used that allowed functional users to complete complex transactions while tracking each and every transaction to ensure system integrity. Mr. Kassil's efforts were not fully appreciated until the users had to live a full 2 weeks without this application being available. The numerous requests and pleas to turn it back on testify to the value it and Mr. Kassil have added to our process. He is therefore commended for continuing to contribute to our efforts while receiving little or no recognition, maintaining his professionalism none-the-same.

December 27, 2000

Margaret A. Thomeczek
MARGARET A. THOMECZEK
PERMS Site Manager

DEPARTMENT OF THE ARMY

CERTIFICATE OF ACHIEVEMENT

AWARDED TO

Mr. Joachim Kassil

who has proven himself an invaluable member of the Personnel Electronic Records Management System (PERMS) team. He has consistently placed organizational interest ahead of personal convenience in a manner uncommon to government contractors. Mr. Kassil is a solution seeker that has consistently displayed ingenuity in anticipating and meeting unexpected situations. It is due to his efforts, in a period of limited resources, that PERMS has experienced success.

ko UTILITIES: CAUTIONS

NOTES of CAUTION

1 with the direct mount procedure and with **mg** are closely tied with the SPR's
ate procedure. These problems include not being able to read the documents
tters or not being able to write to the new target platter.

ms associated with migrating records, there are additional concerns. The
re not static. A backup of the database is only a snapshot in time. Any
the ssns which are to be moved need to be looked at closely to make sure
are moved to the target platter. Moreover if the records are to remain at the
tables must be restored.

y and keep the databases as static as possible once **mg** is begun until the
d and removed from the optics.

n processes must be halted while running **mg**. Both the source and target
e throughout the **mg** processes. When the **mg** process is complete, the
moved. This is done to prevent additional writes to the target platter.

new platters into the system, it would be wise to make the target platter
uring the front-end process. (Otherwise documents that are not associated
ritten to the platter. Once the platter is boxed up and shipped to the new
the database will not be available to read to the user community since the
site.)
